

Code Refactoring and Bug Fixing

Bug: request.args.get("note") in app.py

Issue: It was using request.args.get(), which only works for GET requests.

Fix: Changed to request.form.get("note") to properly handle POST requests.

Bug: No proper route for handling GET and POST requests

Issue: The Flask route was only set to "POST", so the page wouldn't load initially.

Fix: Updated @app.route("/", methods=["GET", "POST"]) to allow both GET and POST.

Bug: Notes not displaying properly in home.html

Issue: The template loop {% for note in notes %} was missing an unordered list .

Fix: Wrapped notes inside to display correctly.

app.py

```
from flask import Flask, render_template, request

app = Flask(__name__)

notes = []

@app.route('/', methods=["GET", "POST"])
def index():
    if request.method == "POST":
        note = request.form.get("note")
        if note:
            notes.append(note)
    return render_template("home.html", notes=notes)

if __name__ == '__main__':
    app.run(debug=True)
```

home.html

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Note Taking App</title>

</head>

<body>

  <h1>Add a Note</h1>

  <form method="POST">

    <input type="text" name="note" required>

    <button type="submit">Add Note</button>

  </form>

  <h2>Notes</h2>

  <ul>

    {% for note in notes %}

      <li>{{ note }}</li>

    {% endfor %}

  </ul>

</body>

</html>
```
